

## atHeart Medical **Clinical Specialist** Job Description

At atHeart Medical, we are looking for a dynamic and engaging Clinical Specialist based in the Midwest, Texas or on the West Coast to help drive progression of our US pivotal clinical trial program.

**atHeart Medical** was founded to establish the first transcatheter septal occluder with a metal-free frame, as the new standard of care for atrial septal defects (ASD). We want patients with ASDs to be treated with a device that keeps more transeptal treatment options open for their future. We are a dedicated and supportive international team based between the USA and Switzerland. Our name embeds our values: in everything we do, we have clinical excellence and patients at heart.

We are conducting the US FDA-approved ASCENT-ASD pivotal trial in the USA and in Europe, to demonstrate the safety and efficacy of our reSept ASD Occluder to treat patients with clinically significant, isolated ASD.

As a **Clinical Specialist**, you are a crucial member of the Clinical Affairs team and you are responsible to provide technical guidance at product and study level, working closely with other departments. In the USA, you are a primary resource for clinical support, consisting of education, training, and technical case support for clinical investigators at assigned territory/clinical sites. You will serve as a member of the clinical research team, to support protocol compliance, data collection and facilitate physician product feedback.

### Your Role:

- Drive clinical trial enrollment efforts at assigned sites to achieve performance goals
- Educate and train clinical investigators on the product and provide technical case support
- Manage procedure duties including organization of case support, case scheduling and ensuring adequate device inventory
- Support clinical trial data collection, including product complaint/feedback documentation, and ensuring completeness of data
- Develop relationships with clinical investigators and key hospital personnel to increase awareness and promote growth in the congenital heart defect therapeutic space

**Your Qualifications and Experience:**

- BS/BA degree or equivalent experience
- 3+ years of experience in a clinical specialist role of physician training/case proctoring
- Experience in interventional cardiology, ideally in the field of structural heart implantable devices
- Experience in working in the cardiac catheterization lab
- Basic imaging knowledge of TTE and TEE

**Your Personal Skills and Availability:**

- Able to work independently
- Excellent organizational skills
- Excellent written and verbal communication skills and social competence
- Ability and willingness to travel within the US (50-75 percent) and Europe (periodic extended trips)
- Clinical research conduct, including FDA regulations and ISO 14155
- Availability to meet vendors' requirements, e.g. vaccination for COVID-19 (specific medical or religious considerations may be discussed with HR)
